FOR IMMEDIATE RELEASE

February 4, 2021

VA Rocky Mountain Network health care facilities administer over 33,000 COVID-19 vaccinations

GLENDALE, COLO. – The [Veterans Affairs \(VA\) Rocky Mountain Network](#) announced today that it has administered more than 33,000 initial doses of the COVID-19 vaccine to Veterans and VA medical staff under its care.

In mid-December, the Rocky Mountain Network, also known as Veterans Integrated Service Network (VISN) 19, started vaccinating frontline health care personnel and vulnerable Veterans residing in long-term care and congregate living units.

Shortly after, VISN 19 health care systems, which include facilities and [community-based outpatient clinics](#) in Colorado, Montana, Oklahoma, Wyoming and Utah, began vaccinating additional groups of Veterans receiving care at VA.

“We are working diligently to vaccinate our health care personnel and the most vulnerable Veterans as quickly as possible,” said Ralph Gigliotti, VISN 19 Network Director. “While we are still in the limited supply phase, as soon as vaccines become available, our clinical teams work swiftly to get the vaccine in the arms of our employees and our Veterans.”

VA Medical Centers administer vaccines in accordance with CDC risk group recommendations as supply allows and facilities are currently scheduling vaccinations by appointment. Efforts will continue until every Veteran receiving VA health care has been offered the vaccine. As more vaccine becomes available, facilities will expand to additional groups of eligible Veterans.

Nationally, VA has [administered more than 1 million doses](#) of the vaccine to Veterans and VA health care workers. VA publishes the number of Veterans who have received vaccines at VA facilities across the country on [COVID-19 National Summary website](#).
